Copenhagen, DK • +45 71 49 62 06 • antoniocarmagnani@gmail.com

PROFILE

Experience in real estate development and asset due diligence, from feasibility and financial modeling to zoning analysis and the technical and environmental review of buildings under acquisition. M.Arch. in Architecture Computation at The Royal Danish Academy, with a focus on data-driven approaches to real estate and valuation. Hands-on skills span feasibility and investment sizing, zoning and buildable-potential analysis, predictive property valuation in Python, and building performance and climate risk assessment. Motivated by work where real estate, capital, and rigorous analysis intersect.

EXPERIENCE

Project Assistant in International Infrastructure Projects @ Sweco Danmark A/S

Copenhagen, DK

02.2026 - 07.2026

- Supported advisory teams on capital-intensive water, energy, and transport assets financed by development banks including the World Bank, EBRD, KfW and EIB, working to the appraisal and reporting standards those lenders require.
- Assessed physical climate risk across major water infrastructure assets under lender climate-proofing standards (JASPERS, EBRD), rating each asset to inform adaptation and investment decisions.
- Developed a pricing tool to support bid decisions, parametrizing expert fee bands and project economics for financial viability.

Intern in Responsible Business Conduct @ Ramboll Management Consulting

Copenhagen, DK

05.2025 - 08.2025

- Conducted due diligence for corporate and real estate investment clients, applying the UN Guiding Principles and OECD Guidelines to identify and prioritise material risks across assets and supply chains.
- Reviewed and strengthened the Code of Conduct of real estate investment managers, identifying gaps against international human rights standards to reduce its exposure to risks.
- Developed the firm's real estate ESG due diligence services, centered on building energy and decarbonization assessments aligned with EU building performance regulations.
- Built a fully automated risk-assessment system in Excel, consolidating risk data across supply chains into a single dashboard that updated salient risks dynamically.

Architect @ Isay Weinfeld Architects

São Paulo, BR

02.2023 - 08.2024

- Delivered residential, hotel, and mixed-use developments across South America, North America, Europe, the Middle East, and Asia at one of Brazil's most prominent architecture firms, from feasibility through construction.
- Analysed land-use regulation and buildable capacity on residential and mixed-use developments, studying the zoning envelope against the master plan.
- Carried developments past feasibility into delivery, taking them through design development, technical documentation, and construction on buildings.
- Built a Grasshopper plugin in Python that generates bespoke staircases from a floor plan, cutting staircase modeling from days to around 20 minutes and enabling far more design iterations and geometric complexity.

Trainee in Real Estate Product Development @ OSPA

São Paulo, BR

02.2022 - 10.2022

- Produced 15+ feasibility studies for mixed-use and residential developments across Brazil and the US (São Paulo, Rio de Janeiro, Porto Alegre, Miami) for developer clients.
- Ran financial feasibility studies on candidate sites, sizing investment and return against buildable area, unit mix, price per square metre, and parking to test viability.
- Analyzed municipal master plans and land-use law to determine development potential, unit counts, apartment sizing, and setback rules, identifying regulatory opportunities to maximize buildable value.
- Tested development scenarios in Revit, resolving the unit programme against zoning limits to establish the buildable case behind each feasibility study.
- Produced images, plans, and diagrams and presented feasibility outcomes to developer clients.

Architect @ Felipe Hess Architects

São Paulo, BR

07.2021 - 02.2022

- Developed residential and commercial buildings in São Paulo and Rio de Janeiro from land-use and feasibility analysis through technical documentation and construction.
- Took part in the studio's first ground-up residential building, following it from land-use and capacity analysis through design development and construction.
- Calculated buildable capacity for residential developments under São Paulo's master plan, resolving the zoning parameters into a buildable programme for each site.
- Ran financial feasibility alongside the regulatory analysis, testing saleable area, unit mix, and development cost against the buildable programme.

Intern in Project Management @ Itaú-Unibanco

São Paulo, BR

08.2020 - 07.2021

- Reviewed technical and regulatory documentation on the bank's real estate projects, checking design against Brazilian building, accessibility, and fire-safety standards (NBR) as a compliance gate before construction was authorised.
- Assessed the environmental and energy performance of buildings the bank was acquiring or leasing, reviewing consumption data, efficiency ratings, and certifications as part of internal due diligence.
- Supported technical review of new office towers under construction at the bank's São Paulo headquarters campus, evaluating design documentation for regulatory compliance and environmental performance.

	Independent Consultant @ Self-employed <i>07.2018 - Present</i> • Took on independent projects, software, and consulting for clients across the AEC sector, alongside studies and full-time roles. • Co-founded and ran a small practice delivering projects for 10+ clients in the AEC sector, responsible for client acquisition, scoping, pricing, and delivery. • Built an Excel and VBA financial analysis tool for a private client that ingests monthly statements and PDF exports, categorises transactions automatically, and renders them into a decision dashboard. • Advised a software startup in the built environment over two years on product direction, UI and UX, and applied AI, testing releases and returning improved Revit and Dynamo scripts.	São Paulo, BR and Copenhagen, DK
EDUCATION	M.Arch. in Architecture Computation @ The Royal Danish Academy <i>07.2024 - 07.2026</i> Semester Programme in Building Technology @ Architecture Association <i>07.2022 - 01.2023</i> Summer School in Parametric Design @ Architecture Association <i>06.2019 - 07.2019</i> B.Arch. in Architecture and Urbanism @ Mackenzie University <i>07.2018 - 12.2023</i>	Copenhagen, DK London, UK São Paulo, BR
PROJECTS	House Price Prediction - Competition • Built a predictive model for real estate valuation using ensemble learning (XGBoost, LightGBM, Ridge, CatBoost) and feature engineering on structured property and financial data, finishing in the top 2% of competitors. Real Estate Development Recommendation Tool @ The Royal Danish Academy • Built a machine learning tool that generates site-specific development recommendations for buildings in Copenhagen by integrating financial, social, sustainability, and geospatial data. • Designed a user interface allowing different stakeholders to adjust impact drivers and weighting, with predictive outputs aligned to ESG priorities and local development conditions. Master's Thesis, Computational Urban Analysis for Intensification Strategy @ The Royal Danish Academy	Copenhagen, DK Copenhagen, DK Copenhagen, DK
SKILLS	• Real Estate & Urban: Real estate feasibility modeling, Zoning and land use regulatory analysis, Urban morphology and spatial analysis • Data & Analysis: Python, QGIS, SQL, Power BI, Excel / VBA, HTML • ESG & Sustainability: CSRD, Double Materiality, EU Taxonomy, UNGPs, OECD Guidelines, HRDD, HRIA, LCA (Life Cycle Assessment) • Languages: English (fluent), Portuguese (native), Spanish (fluent), Danish (limited working proficiency), Italian (limited working proficiency)
