Copenhagen, DK • +45 71 49 62 06 • antoniocarmagnani@gmail.com

PROFILE

Experience across real estate development and computational design, from feasibility and financial analysis to spatial and predictive modeling. Recently completed an M.Arch. in Architecture Computation at The Royal Danish Academy, with a focus on computational and data methods for real estate and urban development. Hands-on skills span financial feasibility modeling, GIS and spatial analysis, and machine learning applied to property and market data. Motivated by work where real estate, technology, and data intersect.

EXPERIENCE

Project Assistant in International Infrastructure Projects @ Sweco Danmark A/S

Copenhagen, DK

02.2026 - 07.2026

- Support consulting teams delivering internationally funded infrastructure projects in water, energy, and transport across emerging and developing economies, financed by development banks including the World Bank, EBRD, IFDK, KfW and EIB.
- Built geospatial databases for water and infrastructure projects in QGIS, compiling georeferenced asset data, satellite imagery, and open sources for socio-spatial analysis.
- Developed a pricing tool to support bid decisions, parametrizing expert fee bands and project economics for financial viability.

Intern in Responsible Business Conduct @ Ramboll Management Consulting

Copenhagen, DK

05.2025 - 08.2025

- Conducted human rights due diligence for corporate clients, applying the UN Guiding Principles on Business and Human Rights and OECD Guidelines to assess salient risks across global supply chains.
- Built a fully automated risk-assessment system in Excel, consolidating risk data across supply chains into a single dashboard that updated salient risks dynamically.
- Integrated AI research tools into due diligence workflows to source and cite human rights risk data at scale across high research volumes.
- Led an internal market study mapping 20+ critical raw materials supply chains to identify prospective clients and new ESG service lines, connecting regulatory drivers to concrete business development targets.

Architect @ Isay Weinfeld Architects

São Paulo, BR

02.2023 - 08.2024

- Delivered high-end residential, hotel, and mixed-use projects across South America, North America, Europe, the Middle East, and Asia at one of Brazil's most prominent architecture studios.
- Built a Grasshopper plugin in Python that generates bespoke staircases from a floor plan, cutting staircase modeling from days to around 20 minutes and enabling far more design iterations and geometric complexity.
- Presented the tool in a studio workshop and supported its adoption by colleagues across 10+ projects.

Trainee in Real Estate Product Development @ OSPA

São Paulo, BR

02.2022 - 10.2022

- Produced 15+ feasibility studies for mixed-use and residential developments across Brazil and the US (São Paulo, Rio de Janeiro, Porto Alegre, Miami) for developer clients.
- Ran financial feasibility studies on candidate sites, sizing investment and return against buildable area, unit mix, price per square metre, and parking to test viability.

Architect @ Felipe Hess Architects

São Paulo, BR

07.2021 - 02.2022

- Developed high-end residential projects in São Paulo and Rio de Janeiro from preliminary studies through technical documentation, working in Revit, AutoCAD, and SketchUp.
- Ran financial feasibility alongside the regulatory analysis, testing saleable area, unit mix, and development cost against the buildable programme.

Intern in Project Management @ Itaú-Unibanco

São Paulo, BR

08.2020 - 07.2021

- Reviewed technical documentation from architecture and engineering firms prior to construction authorization, checking drawings against building, accessibility, and fire-safety norms (NBR standards).
- Built a VBA-powered Excel dashboard tracking the bank's corporate furniture inventory across locations, replacing a manual process and speeding up procurement for new-building fit-outs.

Independent Consultant @ Self-employed

São Paulo, BR and Copenhagen, DK

07.2018 - Present

- Delivered independent consulting to clients across the AEC sector, spanning product and UX advice, Revit and Dynamo automation, and financial analysis tooling.
- Co-founded and ran a small practice delivering projects for 10+ clients in the AEC sector, responsible for client acquisition, scoping, pricing, and delivery.
- Advised a software startup in the built environment over two years on product direction, UI and UX, and applied AI, testing releases and returning improved Revit and Dynamo scripts.
- Built an Excel and VBA financial analysis tool for a private client that ingests monthly statements and PDF exports, categorises transactions automatically, and renders them into a decision dashboard.

EDUCATION

M.Arch. in Architecture Computation @ The Royal Danish Academy

Copenhagen, DK

07.2024 - 07.2026

Semester Programme in Building Technology @ Architecture Association

London, UK

07.2022 - 01.2023

Summer School in Parametric Design @ Architecture Association

London, UK

06.2019 - 07.2019

*07.2018 - 12.2023***PROJECTS****Master's Thesis, Computational Urban Analysis for Intensification Strategy @ The Royal Danish Academy Copenhagen, DK**

- Developed a computational framework to identify underused spaces in the historic city center of São Paulo, Brazil, combining urban morphology analysis, land use data, and social vulnerability indicators.
- Built an algorithm that uses urban data, including building typology, use patterns, regulatory conditions, and building use, to generate programmatic and morphological typologies for urban intensification, aligned with the city's existing urban policies.
- Integrated multiple geospatial datasets in QGIS to map spatial relationships between buildings, zoning conditions, and social context at the neighborhood scale.

House Price Prediction - Competition**Copenhagen, DK**

- Built a predictive model for real estate valuation using ensemble learning (XGBoost, LightGBM, Ridge, CatBoost) and feature engineering on structured property and financial data, finishing in the top 2% of competitors.

Real Estate Development Recommendation Tool @ The Royal Danish Academy**Copenhagen, DK**

- Built a machine learning tool that generates site-specific development recommendations for buildings in Copenhagen by integrating financial, social, sustainability, and geospatial data.
- Designed a user interface allowing different stakeholders to adjust impact drivers and weighting, with predictive outputs aligned to ESG priorities and local development conditions.

SKILLS

- Data & Analysis: Python, QGIS, SQL, Power BI, Excel / VBA, HTML
- Real Estate & Urban: Real estate feasibility modeling, Zoning and land use regulatory analysis, Urban morphology and spatial analysis
- Languages: English (fluent), Portuguese (native), Spanish (fluent), Danish (limited working proficiency), Italian (limited working proficiency)
