Dear Northmoore team,

I trained as an architect, but the question that kept pulling me was never how a thing looks, it was whether it survives contact with the world. Who pays for it, who has to adopt it, what has to be true for it to matter beyond the people who made it. That is what took me from São Paulo to Copenhagen for an M.Arch in Architecture Computation at The Royal Danish Academy, and then into consulting. Helping research projects turn results into something that reaches the market is a version of that question I would enjoy working on full time.

Until July I worked at Sweco's international department, supporting teams delivering water, energy and transport projects financed by the World Bank, EBRD, KfW and EIB, to the appraisal and reporting standards those lenders require. I wrote the climate risk and adaptation chapters of project Inception Reports for client and lender review, assembled bid teams for competitive international tenders by sourcing the specialist consultants needed to evidence local expertise, and contributed the technical and methodology sections of the proposals themselves. Multi-partner, multi-year, funded by somebody who wants to see the deliverable is a familiar shape to me.

The other half of your job I know from the other side. At Ramboll I led an internal market study mapping the supply chains of more than twenty critical raw materials, connecting regulatory drivers to concrete business development targets, and I built workshop and training materials for a corporate client. For two years I advised a software startup in the built environment on product direction and where their product actually fit. I also co-founded and ran my own practice with more than ten clients, doing the acquisition, scoping and pricing myself, which is the least glamorous and most useful preparation for sitting across from a founder.

A ten-person team where the work is genuinely varied and ownership comes early is the kind of place I want to be next.

All the best,

Antonio Carmagnani
