Dear Hiring Team at Genesta,

Genesta is not a new name to me. At Ramboll's Responsible Business Conduct team I worked with your firm, reviewing and strengthening your Code of Conduct against international standards. That was advisory work from the outside, but it gave me a real sense of how Genesta operates as a real estate investment manager, and the Investment Management Analyst role is a chance to do the part of real estate I have been building toward, from the inside this time.

I trained as an architect in Brazil, but what held me was the decision before the drawings, why a site is worth it, what it costs and returns, whether the numbers support the plan. That pulled me from design into feasibility and financial analysis, and then to an M.Arch. in Architecture Computation at The Royal Danish Academy, where I learned to answer those questions with data.

At OSPA I produced feasibility studies for 15+ mixed-use and residential developments across Brazil and the US. For each I ran early-stage financial feasibility, sizing investment and return against buildable area, unit mix, price per square metre, and parking, and I presented the outcome to the people making the call. Sizing an asset's economics, testing it under different assumptions, and turning it into a recommendation is the analytical core this role runs on.

The data and AI side is where I go further than most at this level. I built an ensemble model for property valuation (XGBoost, LightGBM, CatBoost) that placed in the top 2% of its competition, an ML tool that turns financial, social, and spatial data into site-specific recommendations, and at Ramboll I brought AI tools into the research workflow to source and cite evidence at scale. Python, SQL, and Power BI are working tools for me, not line items on a page.

Genesta pairs private equity real estate with a real push into data-driven, AI-supported investment decisions. That combination, at a firm I already know, is where I want to start.

All the best,

Antonio Carmagnani
